## **Anatomy and Human Movement : Structure and function**

All living structures of human anatomy contain cells, and almost all functions of human physiology are performed in cells or are initiated by cells. A human cell typically consists of flexible membranes that enclose cytoplasm, a water-based cellular fluid together with a variety of tiny functioning units called organelles. In humans, as in all organisms, cells perform all functions of life.

## **1.2 Structural Organization of the Human Body - Anatomy ...**

Over the past 22 years, Anatomy and Human Movement has grown into a classic textbook, helping students to understand and remember the mechanisms which allow movement to take place. Now in its sixth edition, the approach remains the same - each section of the body is presented systematically where readers are introduced to the bones, then guided through the muscles, joints , nervous system and blood supply.
