For tutoring please call 856.777.0840 I am a registered nurse who helps nursing students pass their NCLEX. I have been a nurse since 1997. I have worked in a...

Combining like terms calculator - Algebrator

A regression model is a linear one when the model comprises a linear combination of the parameters, i.e., $(,) = \sum = (,)$, where the function is a function of .. Letting $= (,)$, we can then see that in that case the least square estimate (or estimator, in the context of a random sample), is given by $\hat{=} = -$. For a derivation of this estimate see Linear least squares (mathematics).
